

ARMAAN CHOUDHARY

SOFTWARE ENGINEER

Delhi NCR | GitHub: github.com/armaan-choudhary | LinkedIn: linkedin.com/in/armaan-choudhary-816392315/

PROFESSIONAL SUMMARY

Software Engineer based in Delhi NCR building high-performance web applications that pair scalable system architecture with fluid user interfaces. Portfolio work spans production WordPress builds, real-time React applications, privacy-first local RAG systems, and edge AI optimization. Focused on maintainability, secure integrations, and fast product experiences.

SKILLS

Languages:	JavaScript (ES6+), Python, PHP 8.2+ (OOP)
Frameworks & Platforms:	React 19, FastAPI, WordPress, Supabase
Frontend:	Tailwind CSS, Framer Motion, GSAP 3, Swup.js
Backend & Data:	REST API, PostgreSQL, MySQL, FAISS, BM25
AI/ML:	Google Gemini 2.5, Sentence Transformers, Llama.cpp, PyTorch, TensorRT, INT8 Quantization
Developer Tools:	Vite, Git

EXPERIENCE

Client Projects	2026
- Delivered solo client work across Fortune Wander and QueenTrends Theme. - Built production WordPress systems featuring editorial UX, SPA-style navigation, and component-based PHP. - Implemented responsive srcset rendering and secure AI/REST integrations. - Achieved 80% lower image payloads, 95+ Lighthouse scores, sub-second LCP, and 0 page reload navigation.	

FEATURED PROJECTS

FortuneWander — <i>Full-Stack Developer & Architect</i>	2026
- Engineered a WordPress travel portal with Vite, Swup.js, Lenis Scroll, PHP, MySQL, and Vanilla JS for SPA-style navigation on a monolithic CMS. - Built a custom Google Gemini 2.5 travel consultant plugin with secure REST API endpoints and nonce auth. - Integrated transient-based IP rate limiting and automated HTML itinerary generation. - Developed a whitelist-based wp_kses sanitizer and custom PHP asset loader for production launch with 0 page reload navigation.	
Zola — <i>Creator & Lead Developer</i>	2025
- Built a real-time collaborative constellation platform using React 19, Vite, Supabase, PostgreSQL, Framer Motion, and the Canvas API. - Developed a custom Single-Hub MST algorithm and isolated animation state to reduce mobile GPU bottlenecks and stabilize rendering. - Deployed the full-stack application in 48 hours, maintaining 60fps on mobile GPUs and zero-latency WebSocket state synchronization.	

- Built a local RAG workspace for financial analysts utilizing FastAPI, Python, FAISS, BM25, Sentence Transformers, Llama.cpp, and Tailwind CSS.
- Combined dual retrieval, cross-encoder reranking, and page-level citation mapping to preserve exact numerical lookup.
- Kept processing 100% offline and reduced irrelevant context chunks by over 90%.

EDUCATION

Bennett University — *Bachelor's Degree***2024 – Present**

- Achieved A+ in first-semester examinations, demonstrating strong understanding of core computer science concepts.

The Millennium School**2020 – 2022**

- Scored A+ in most subjects in the CBSE Board Examination, demonstrating strong proficiency in technology and flexibility.
